Screen plan & navigation

Account-based access, shared group records and simple personal profiles.

Team: Efe Çağan Akkuş 32413 · Emir Keskin 31020 · Yunus Emre Yolal 31294

Updated scope: Every member has an account. Shared groups, expenses and settlements will use Firestore; profiles hold full name, optional photo and optional IBAN. Balances are derived from expenses and settlements. This replaces the single-device scope and is proposed for TA review.

MAIN PATH

S01 Log in → **S03 My groups** → **S05 Overview**

ACTION / SOURCE	DESTINATION / RETURN
Create account / S01	S02 -> valid confirmation -> S03
Create group / S03	S04 -> invite panel -> S05
Join group / S03	S10 -> preview + confirm -> S05
Profile / S03	S09 -> Edit panel -> S09; Back -> S03
Add expense / S05	S06 -> confirmation -> S05
View or edit / S05	Details panel -> S06 edit -> S05; Back -> S05
Group tabs / S05, S07, S08	Expenses S05 <-> Balances S07 <-> Members S08
Payment / S07	Payment panel -> confirmation -> S07
Owner invite / S08	Invite panel -> Close -> S08

Stage boundary: Step 2 shows mock records and simulated login, profile, invite and save states. Step 3 connects Firebase Authentication, Firestore and Cloud Storage for optional photos. Provider will manage UI state. No Firebase connection or live synchronization is claimed in these wireframes.

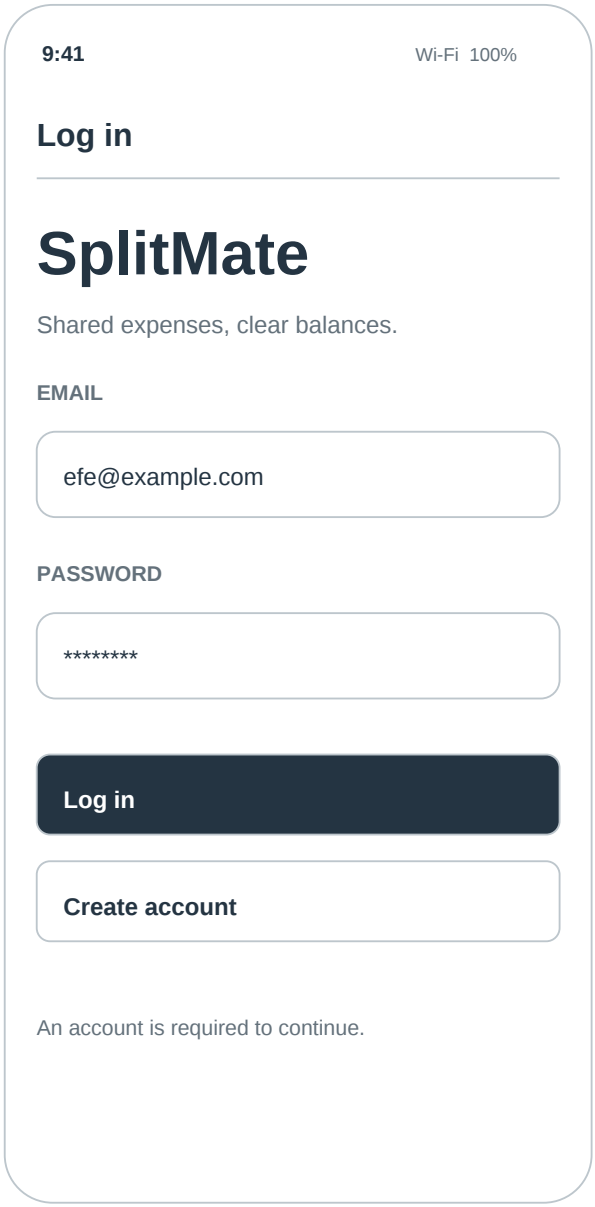

Legend: Dark buttons are primary actions; light cards are selectable records. 10 main screens; four contextual panels are specified on the final page. Group tabs retain the selected group. Photo/IBAN are optional. Step 2 coordinator: Yunus Emre Yolal (31294). TA feedback remains pending.

Entry & account screens

Two portrait wireframes per page. Labels and numbers are illustrative.

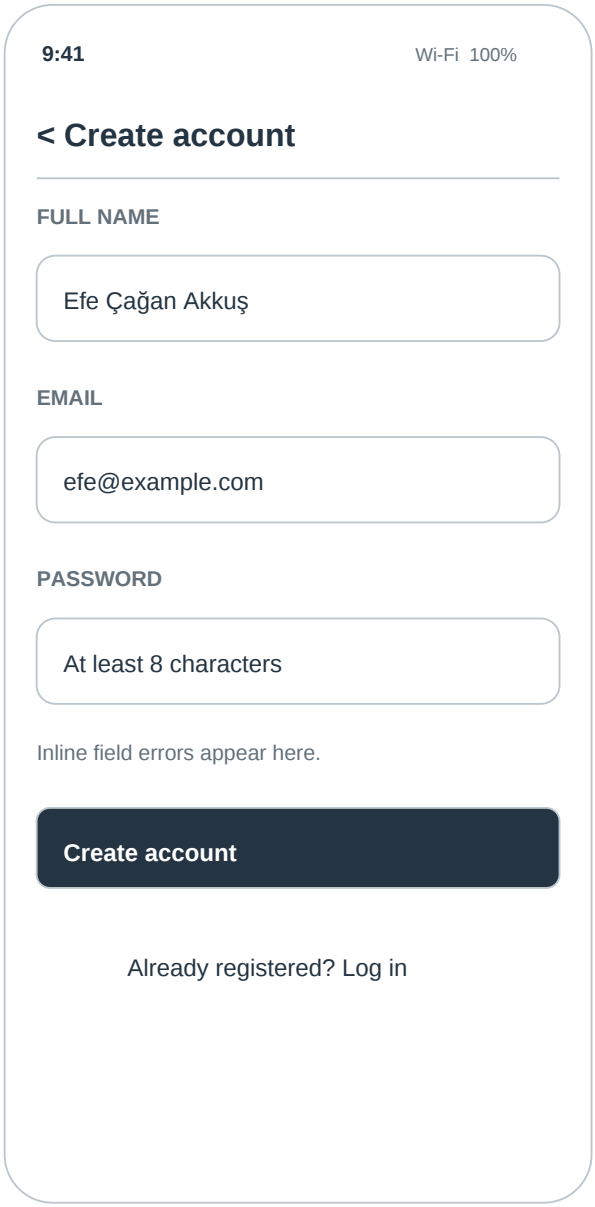

01 Log in

Sign in with email and password to view your shared groups. An account is required; guest access is removed. Step 2 uses simulated success/error states; Firebase Authentication follows in Step 3.

Navigation: Log in -> S03; Create account -> S02.

02 Create account

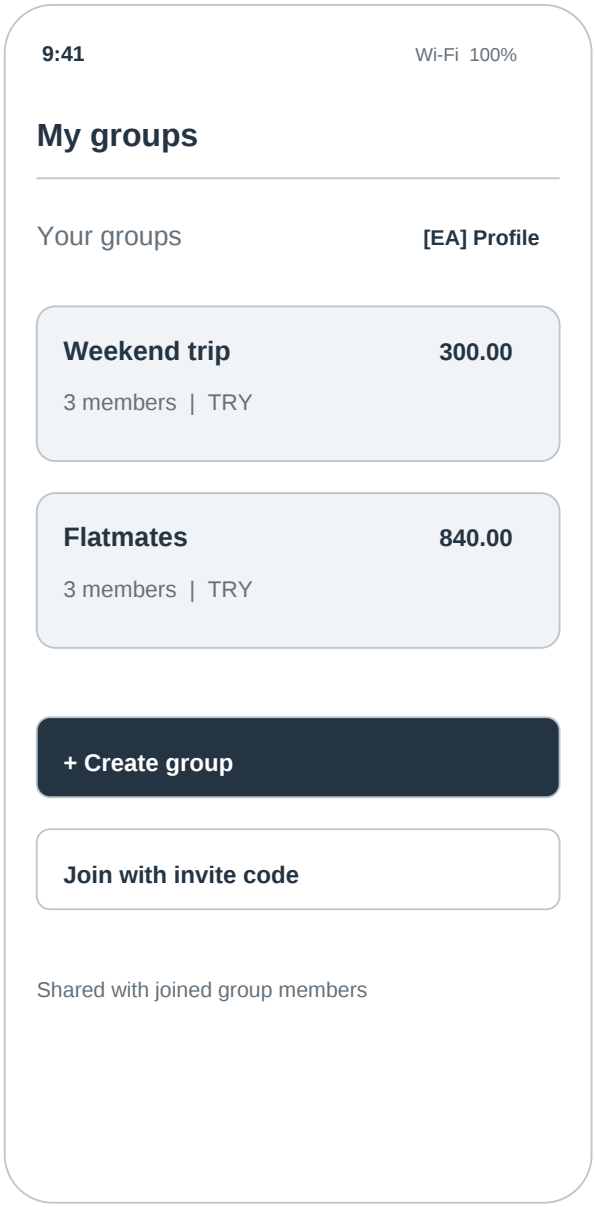

Enter full name, email and password. Confirm valid details to enter S03. Photo and IBAN are optional and added later in the profile edit panel. Authentication is simulated in Step 2.

Navigation: Create account -> confirmation -> S03; Back -> S01.

Groups & creation

Two portrait wireframes per page. Labels and numbers are illustrative.

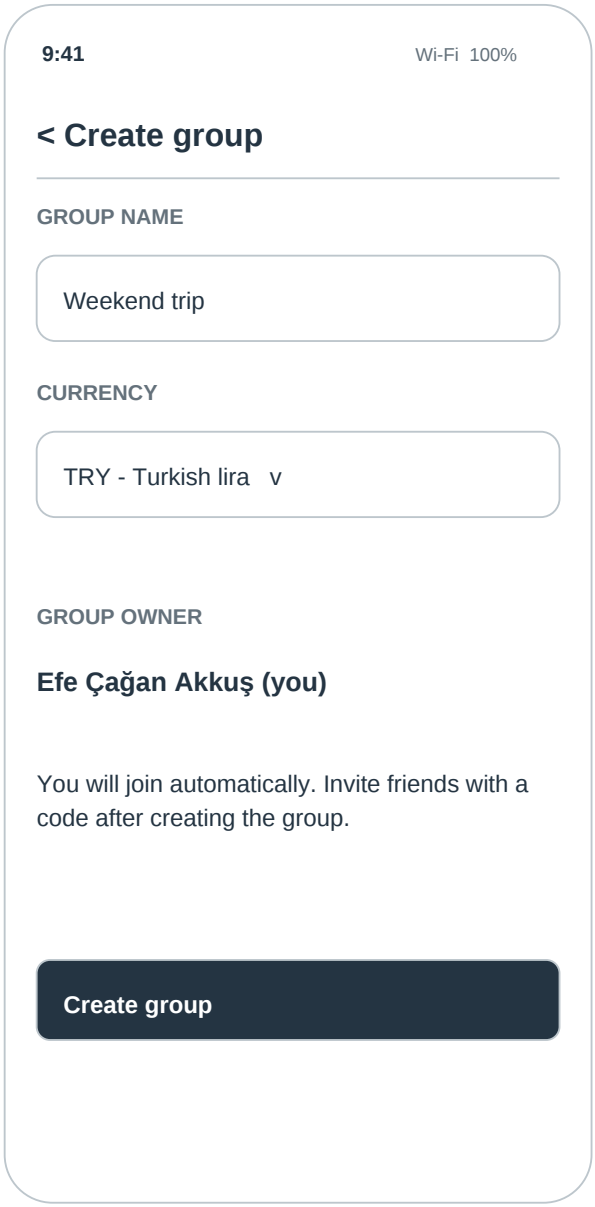

03 My groups

Home lists only groups joined by the signed-in user. Create a group or join with an invite code. The profile button opens your own profile. Shared records will sync through Firestore in Step 3.

Navigation: Group -> S05; Create -> S04; Join -> S10; Profile -> S09.

04 Create group

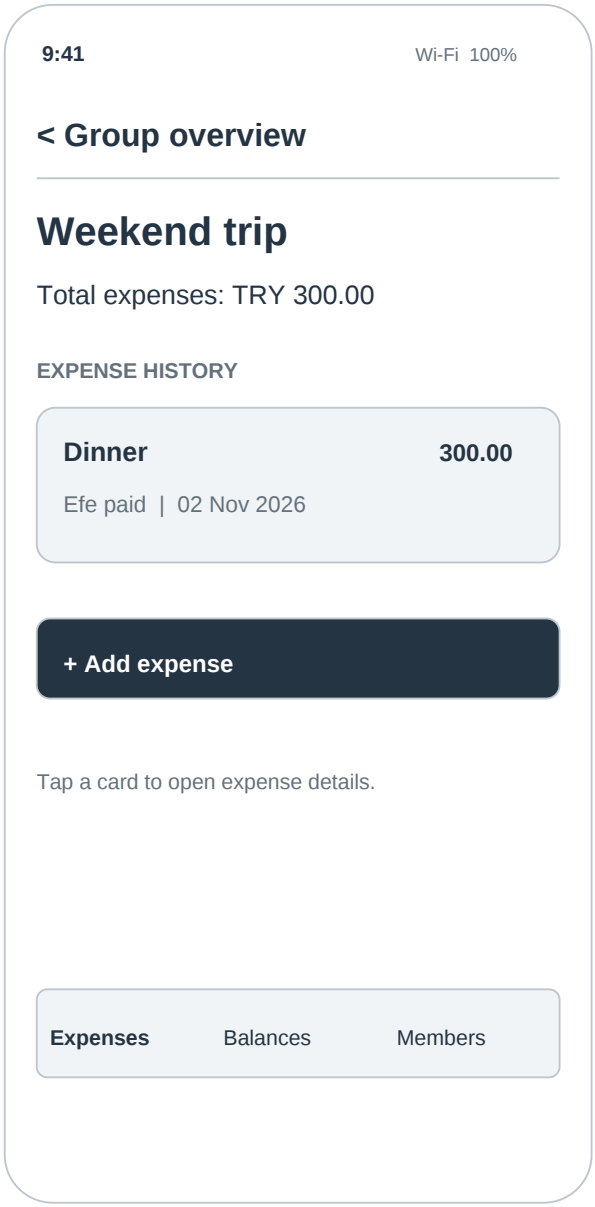

Choose the group name and currency. The creator becomes its first member and owner. Do not enter other people as local labels; invite registered accounts after creation.

Navigation: Create -> confirmation -> S05 + invite panel; Cancel / Back -> S03.

Expense history & entry

Two portrait wireframes per page. Labels and numbers are illustrative.

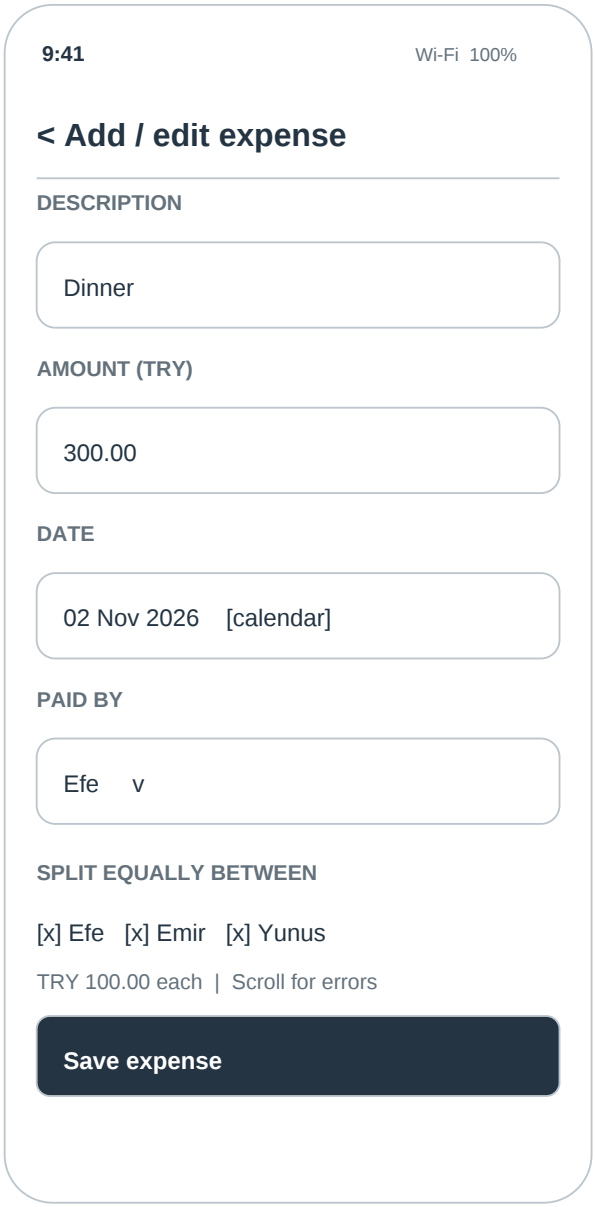

05 Group overview

View the group total and expense history. Expense cards show payer, amount and date. Open a card to inspect it; use the tabs for balances or members.

Navigation: Add expense -> S06; Expense -> details panel; Balances -> S07; Members -> S08.

06 Add / edit expense

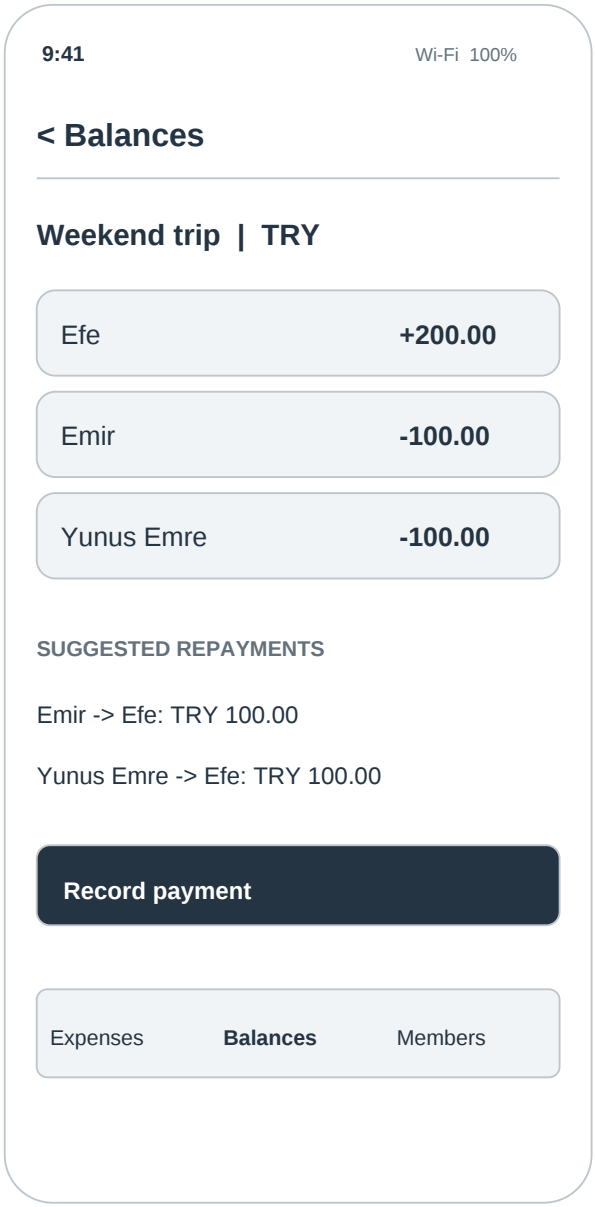

Enter description, positive amount, date, payer and participants selected from joined members. Split equally. Editing pre-fills the form. Only the expense creator can edit/delete it; others can view.

Navigation: Valid Save -> confirmation -> S05 (add or edit); Cancel -> source.

Balances & members

Two portrait wireframes per page. Labels and numbers are illustrative.

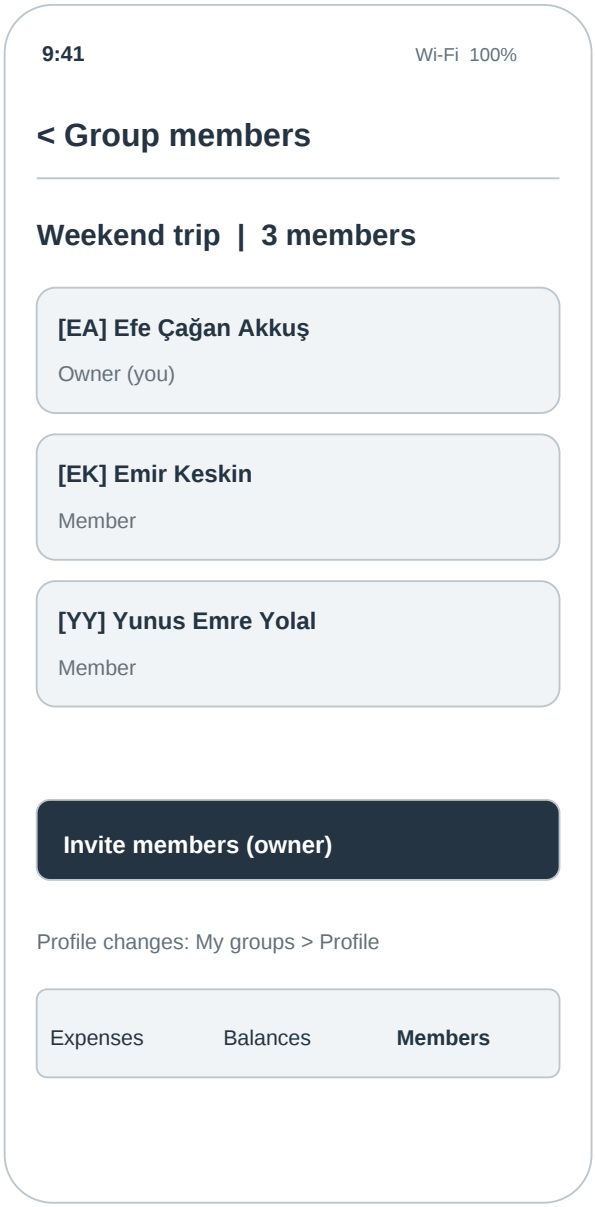

07 Balances

Show net balances and suggested repayments. Positive means the member should receive money; negative means they owe money. The group ledger remains balanced.

Navigation: Record payment -> payment panel; Expenses -> S05; Members -> S08.

08 Group members

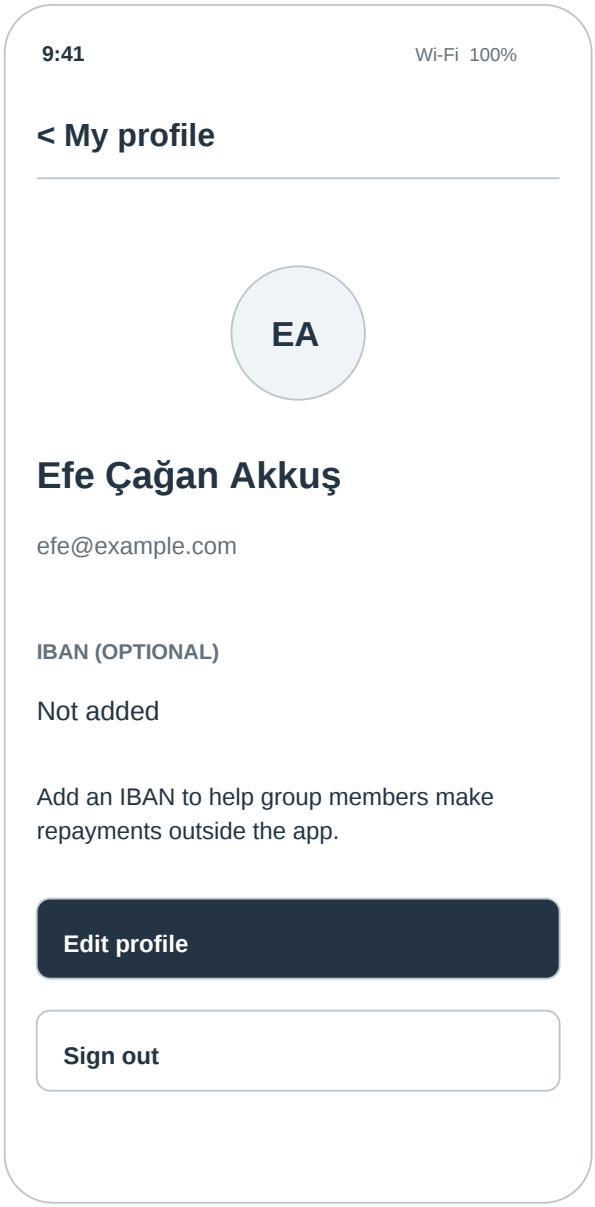

List joined accounts and their profile photos or initials. Members edit only their own profile. The owner manages invite codes; all group members may view the list. IBANs are not shown here.

Navigation: Owner: Invite members -> invite panel; Expenses -> S05; Balances -> S07.

Profile & joining a group

Two portrait wireframes per page. Labels and numbers are illustrative.

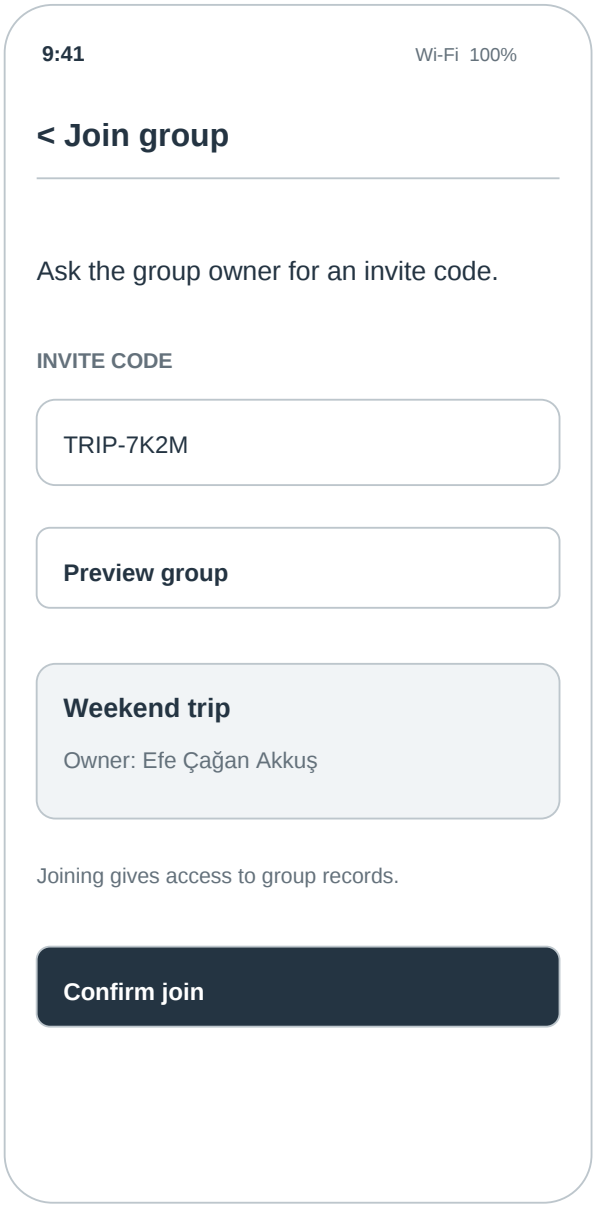

09 My profile

View your own full name, photo or initials, email and optional IBAN. Email is read-only for this scope. Sign out clears the signed-in session and returns to login.

Navigation: Edit profile -> edit panel; Sign out -> confirm -> S01; Back -> S03.

10 Join group

Enter an invite code, preview the group name and owner, then confirm joining. Invalid or expired codes show an inline error. Already joined groups open directly without a duplicate membership.

Navigation: Preview -> same screen; Confirm join / Open group -> S05; Back -> S03.

Panels & interaction states

Four panels supplement the 10 main screens without adding page routes.

Expense details panel - S05

Tap an expense card to open a sheet with description, date, total, payer and each share. The creator sees Edit and Delete. Edit opens S06; confirm deletion to update the ledger. Dismiss returns to S05.

Record payment panel - S07

Show the current user as sender, a recipient selector, outstanding amount, optional recipient IBAN with Copy, and an amount field. Confirm an amount up to the outstanding repayment. Close returns to balances; the app records payments without transferring money.

Edit profile panel - S09

Show full name, optional photo controls and optional IBAN. Validate the name and any supplied IBAN. Explain that fellow group members can see the IBAN in payment details. Save or cancel returns to the profile.

Invite code panel - S05 / S08

Open after creating a group or from Invite members. Show the code, Copy and owner-only Reset with confirmation. Reset invalidates the old code while preserving memberships. Close returns to the underlying group screen.

Validation, empty and failure states

Show inline errors and confirm valid submissions before saving. Offer Create / Join for empty groups and Add expense for empty history. Show All settled for zero balances. Preserve input on failure and block duplicate submissions.

Step 2 / Step 3 boundary

Use mock data for the Step 2 UI. Connect Firebase in Step 3, with member-only group access and owner-only profile editing. Recalculate balances from expenses and settlement records.

Planned data responsibilities (Step 3)

Authentication: accounts. Firestore: profiles, memberships, groups, expenses and settlements. Storage: optional photos. Enforce member-only group access and owner-only profile editing with backend rules; screen visibility alone is insufficient.
